Dear Hiring Team,

I am a Computer Science student at Laval University and I am excited to apply for Onware's Full Stack Developer Summer Intern Opportunity in Edmonton. I am authorized to work in Canada and open to internships anywhere in Canada. Onware's focus on turning data into practical software for architecture, engineering, and construction clients fits well with my background in client-facing web development, API-backed applications, and data accuracy.

At Mafhoum, I co-founded and architected a full-stack community learning platform, designing more than 50 REST API endpoints across authentication, communities, courses, gamification, and payments. I implemented real-time Socket.IO features, JWT rotation, OAuth login flows, Prisma schema modeling, PostgreSQL-backed data flows, and Dockerized local environments. This gave me hands-on practice keeping front-end behavior, backend services, and data models aligned while building maintainable product features.

I also shipped a client-approved responsive website during my CHC Navigation web development internship and currently handle sensitive, high-volume data work at Retraite Quebec. While Onware's stack includes .NET, C#, Angular, Azure, and Microsoft SQL Server, my verified foundation in JavaScript, Python, C++, Java, SQL, REST APIs, databases, OOP, and software engineering coursework would help me ramp quickly and contribute reliably within a collaborative development team.

Thank you for your time and consideration. I would welcome the opportunity to support Onware's development team, learn your stack, and help deliver high-quality software for real client workflows.

Sincerely,
Mohamed Slim
