Hiring Team
Brilliant Harvest / AltaML

Dear Hiring Team,

I am applying for the Associate Software Developer (Brilliant Harvest) internship for Fall 2026. I am a Computer Science student at Laval University, authorized to work in Canada without sponsorship, and I am interested in Brilliant Harvest because the role connects software development, AI-powered assistance, data analytics, and agricultural workflows in a practical product environment.

My background aligns with the posting's focus on designing, building, testing, debugging, and documenting software with a product team. I co-founded Mafhoum, a production-bound community learning platform built with React 19, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, and Docker, where I designed 50+ REST API endpoints, implemented authentication and real-time interactions, and helped turn product ideas into a clear roadmap with a small team.

I also have directly relevant agriculture and AI context from my current HMD Agro internship, where I am integrating an existing farm-management platform by building an API-backed AI module and reporting interface for crop and dairy workflows. In parallel, I built a Python-based multi-agent AI orchestrator using Claude Agent SDK, Discord.py, JSONL history, isolated prompts, and persistent memory, plus VoiceBubble, a macOS dictation app combining local Whisper transcription with Claude-based refinement.

Brilliant Harvest's mission to help dealership teams find answers faster and reduce downtime is the kind of applied software problem I want to work on: useful, data-backed, and close to real users. I would bring Python, JavaScript, REST API, database, Docker, Git, Agile/Scrum, and AI tooling experience, along with curiosity and a willingness to learn from senior developers, product managers, and data scientists.

Sincerely,
Mohamed Slim
