Hiring Team
Auvik

Dear Hiring Team,

I am applying for the Software Developer Co-op (8 or 12 Month Term) role at Auvik. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in Auvik because the role combines full-stack product development, Agile delivery, and cloud-based network management software that gives IT teams practical visibility and control.

Your posting emphasizes the full software development process: collaborating with product managers and designers, attending sprint ceremonies, building scalable and reusable solutions, and contributing across product areas that use JavaScript, React, APIs, databases, cloud services, and streaming or data-driven systems. My strongest fit is full-stack software development. On Mafhoum, a production-bound learning platform I co-founded, I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments; implemented Socket.IO real-time interactions; modeled PostgreSQL/Prisma workflows; and used Docker for reproducible development. I also have hands-on experience with React, Vue, Node.js/Express, FastAPI, SQL, Redis, JWT/OAuth, Git, and Swagger/OpenAPI-backed development.

I would bring Auvik a builder's mindset and a strong learning orientation. In my current HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform while coordinating requirements and milestones with stakeholders. In my CHC Navigation internship, I shipped a client-approved responsive website, and in my Retraite Québec role I have built the accuracy, communication, and deadline discipline needed for sensitive operational work.

Auvik's distributed work model is also a practical match: I can contribute remotely from Quebec City while staying aligned with a Canadian team. I would be glad to bring my JavaScript, API, database, real-time systems, and Agile project experience to Auvik while continuing to grow on production software used by technical customers.

Sincerely,
Mohamed Slim
