Hiring Team
BDO Canada

Dear Hiring Team,

I am applying for the Co-op or Intern, Full-Stack Developer role for September 2026. I am a Computer Science student at Laval University, authorized to work in Canada without sponsorship, and I am interested in BDO because the role combines practical client-focused software delivery with full-stack web development and modern AI-enabled tooling.

My strongest fit is hands-on full-stack engineering. I co-founded Mafhoum, a production-bound community learning platform built with React 19, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, and Docker. I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, implemented real-time features, and worked on authentication flows including JWT rotation and OAuth login. That experience maps well to building reliable features across frontend, backend, data, and integration layers.

I also bring relevant experience from both internship and AI tooling projects. At CHC Navigation, I designed and shipped a responsive product showcase website in HTML, CSS, and JavaScript that reached production deployment and client approval. More recently, I built Python-based AI tools, including a Discord multi-agent orchestrator using Claude Agent SDK and VoiceBubble, a macOS dictation app combining local Whisper transcription with Claude-based refinement. These projects give me a practical base for contributing to full-stack development while learning BDO's specific stack, including technologies such as ASP.NET Core, Azure, and Azure OpenAI where required.

I would be excited to bring my web application, API, database, real-time systems, and Python AI-tooling experience to BDO's September 2026 full-stack developer internship and contribute to useful software for internal teams and clients.

Sincerely,
Mohamed Slim
