Hiring Team
Capital One Canada

Dear Hiring Team,

I am applying for the Intern, Full Stack Software Engineer – Team Integrated Storefront position for Fall 2026 in Toronto. I am a Computer Science student at Laval University and I am authorized to work in Canada without sponsorship. Capital One's focus on building customer-facing digital banking experiences is a strong match for the kind of full-stack product engineering I want to contribute to during an internship.

My most relevant experience is Mafhoum, a production-bound community learning platform I co-founded and architected with React 19, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, and Docker. I designed 50+ REST API endpoints, implemented authentication flows, built real-time features, and collaborated with a small team on product scoping, feature prioritization, and implementation sequencing. That background maps well to the posting's focus on feature development, bug fixes, peer review, testing, and supporting software from implementation toward production.

I also bring practical web delivery experience from my CHC Navigation internship, where I shipped a responsive product showcase website that reached production deployment and client approval. In my current HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform, which has strengthened my ability to work from requirements, coordinate with stakeholders, and keep technical work aligned with user workflows.

I would bring JavaScript, React, Node.js, REST API, Git, Docker, database, testing, and Agile/Scrum experience, plus a willingness to learn Capital One's cloud, CI/CD, monitoring, and security practices. Thank you for considering my application.

Sincerely,
Mohamed Slim
