Hiring Team
Hitachi Rail Canada Inc.

Dear Hiring Team,

I am applying for the Software Analyst Intern role in Toronto for Fall 2026. I am a Computer Science student at Laval University and am authorized to work in Canada. Hitachi Rail's work on safety-critical railway systems, digital transformation, and software engineering is a strong match for the disciplined, team-based engineering environment where I want to contribute and grow.

My strongest overlap is practical software development with Python, C++, APIs, Docker, Git, and data-backed systems. In Mafhoum, a production-bound learning platform I co-founded, I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments; implemented real-time interactions with Socket.IO; modeled data with Prisma and PostgreSQL; and used Dockerized local environments. That work maps well to developing, testing, documenting, and improving software toolchains in a collaborative engineering team.

I also bring experience building automation-oriented AI tools. My Multi-Agent AI Orchestrator uses Python, Claude Agent SDK, Discord.py, JSONL history, isolated prompts, persistent memory, and scheduled agent workflows. Voice-Bubble combines local MLX Whisper transcription, Claude-based refinement, PyQt6, and SQLite. These projects strengthened my debugging habits, documentation discipline, and ability to integrate multiple components into reliable workflows.

I understand the role emphasizes software development, algorithm implementation, Python, C, shell scripting, CI methods, Git/Bitbucket/Jira/Jenkins/Artifactory, Docker, testing, and clear documentation for safety-critical systems. I am not claiming direct railway or safety-critical embedded production experience, but I bring a strong software foundation, verified Canadian work authorization, and a serious interest in learning from senior engineers while contributing carefully to Hitachi Rail's software team.

Sincerely,
Mohamed Slim
