Hiring Team
Huawei Canada
Markham, Ontario

Dear Hiring Team,

I am applying for the Intern Engineer - Web & AI role at Huawei Canada. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in the role because it sits at the intersection of web engineering and applied AI systems.

My strongest experience is in full-stack web development, REST APIs, authentication, real-time features, and AI-assisted tools. I co-founded Mafhoum, a production-bound community learning platform built with React, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, and Docker, where I designed 50+ API endpoints and implemented real-time interactions and authentication flows. I have also built AI-focused Python projects, including a Discord-based multi-agent orchestrator using Claude Agent SDK and a macOS dictation app that combines local Whisper transcription with Claude-based refinement.

I would bring Huawei Canada a practical web-development foundation, comfort with Python and JavaScript, and curiosity about building usable AI-powered interfaces. I have not seen the full posting beyond the public LinkedIn card, so I am keeping this letter focused on verified overlap: web development, AI tooling, and software project delivery.

Thank you for your consideration. I would welcome the opportunity to discuss how my React, backend API, Python, and applied-AI project experience could support Huawei Canada's Web & AI team.

Sincerely,

Mohamed Slim
