Hiring Team
Microsoft

Dear Hiring Team,

I am applying for the Research Intern - Artificial Intelligence role in Vancouver. I am a Computer Science student at Laval University, authorized to work in Canada without sponsorship, and I am interested in research-oriented AI work that turns model capabilities into reliable software systems. The posting evidence available to me confirms the Microsoft role title and Vancouver location; I have therefore kept this letter focused on verified AI/software strengths rather than assuming a specific lab, team, or publication area.

My strongest fit is hands-on AI tooling and experimentation. I built a Discord-based multi-agent AI orchestration system in Python using Claude Agent SDK, Discord.py, JSONL conversation history, isolated prompts, and persistent markdown memory so specialized agents could retain role-specific context across sessions. I also built VoiceBubble, a macOS push-to-talk dictation app combining local MLX Whisper transcription, Claude-based refinement, PyQt6, and SQLite. These projects gave me practical experience designing prompts, integrating AI models into workflows, handling state, and evaluating behavior through repeated use.

I also bring software engineering depth from Mafhoum, a production-bound learning platform I co-founded with React 19, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, and Docker. I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, and implemented real-time interactions and authentication flows. My coursework includes machine learning, databases, operating systems, data structures and algorithms, and software engineering, which gives me a solid base for contributing to AI research prototypes while continuing to grow under experienced researchers and engineers.

Microsoft stands out because the role combines artificial intelligence with the scale and engineering discipline needed to make ideas useful. I would be excited to bring my Python, LLM tooling, Whisper, data-backed application development, and product-building experience to the Research Intern - Artificial Intelligence role in Vancouver.

Sincerely,
Mohamed Slim
