Nuclear Promise X Hiring Team
Re: Software Developer Intern, Digital Transformation

Dear Nuclear Promise X Hiring Team,

I am applying for the Software Developer Intern, Digital Transformation role starting September 8, 2026. I am a Computer Science student at Laval University, based in Quebec City, and authorized to work in Canada. NPX's work is compelling to me because the Digital Transformation team combines software, AI-enabled applications, and practical stakeholder needs to help nuclear utilities work more safely and efficiently.

My strongest match is full-stack product engineering with React, Node.js, Python, REST APIs, PostgreSQL, Redis, Docker, and real-time systems. On Mafhoum, I co-founded and architected a production-bound community learning platform, designed more than 50 REST API endpoints, modeled data with Prisma/PostgreSQL, used Redis and Socket.IO for real-time features, and kept the development environment Dockerized. That experience maps well to building and maintaining features, lightweight applications, and production-ready tools with a modern web stack.

I also bring hands-on AI and automation experience. My Multi-Agent AI Orchestrator uses Python, Discord.py, Claude Agent SDK, JSONL history, persistent memory, and scheduled agent handoffs to coordinate specialized roles. In my HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform while coordinating requirements and milestones with stakeholders. These projects match NPX's focus on prototyping AI-enabled functionality, translating user needs into technical solutions, testing, integration, and iterative delivery.

I would be excited to contribute to NPX's digital transformation projects while learning from your team about deploying AI and software in a safety-critical industry. I understand the posting notes a nuclear security clearance as a condition of employment, and I would complete any required human-review steps honestly and directly. Thank you for your consideration.

Sincerely,
Mohamed Slim
