Dear Hiring Team,

I am a Computer Science student at Laval University, authorized to work in Canada, and I am excited to apply for ShyftLabs' AI Engineer Intern role in Toronto. The Continuum platform's focus on agent orchestration, memory, model routing, retrieval, tools, guardrails, evaluation, and observability is closely aligned with the AI systems I have been building in Python.

My strongest fit is my Multi-Agent AI Orchestrator project, where I built a Discord-based system that routes work to specialized Claude agents and uses cron jobs for standups, progress checks, reviews, and handoffs. I added isolated prompts, JSONL conversation history, and persistent memory so each agent can keep role-specific context across sessions. That experience maps directly to ShyftLabs' work on reliable agent workflows, state management, tool use, and traceable AI execution.

I also bring practical software engineering experience from Mafhoum, a production-bound full-stack platform I co-founded and architected with React, Express.js, PostgreSQL, Redis, Socket.IO, Prisma, and Docker. I designed more than 50 REST API endpoints and implemented real-time interactions, authentication flows, and local development infrastructure. Alongside that, I built VoiceBubble with local Whisper transcription and Claude-based refinement, giving me hands-on exposure to LLM-powered applications beyond simple demos.

Thank you for your time and consideration. I would welcome the opportunity to contribute to Continuum as an intern who can learn quickly, write clean Python, experiment carefully, and help build dependable AI systems for real enterprise use cases.

Sincerely,
Mohamed Slim
