Hiring Team
Super.com

Dear Hiring Team,

I am applying for the Software Engineering Intern - Product (Full-Stack) role at Super.com for the Fall 2026 term. I am a Computer Science student at Laval University, authorized to work in Canada, and I am especially interested in Super.com's remote-first Canadian internship because it gives interns ownership of shipped product work from the frontend through backend services.

Your posting emphasizes end-to-end feature ownership, React/TypeScript frontend work, Python/FastAPI back-end services, Postgres/Redis, experimentation, monitoring, and production systems that handle high request and data volumes. My strongest fit is full-stack product engineering: on Mafhoum, a production-bound learning platform I co-founded, I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments; implemented Socket.IO real-time interactions; modeled PostgreSQL/Prisma workflows; and used Docker to keep development reproducible. I also have hands-on React, Vue, Node.js/Express, FastAPI, SQL, Redis, JWT/OAuth, and API verification experience.

I would bring Super.com a practical builder's mindset: understand the user workflow, ship the interface and service, test the behavior, and iterate from data and feedback. In my current HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform while coordinating requirements and milestones with stakeholders. In my CHC Navigation internship, I shipped a client-approved responsive product website, and in my Retraite Québec role I have developed the accuracy and deadline discipline needed for sensitive, high-volume work.

Super.com's product engineering internship stands out because it combines a fast-moving startup environment with real ownership and a stack that matches my current projects. Because candidates can be based anywhere in Canada with Eastern Time overlap, I can contribute remotely from Quebec City while collaborating closely with the Toronto team. I would be glad to bring my full-stack, API, and product-shipping experience to Super.com and keep learning from engineers building systems used at scale.

Sincerely,
Mohamed Slim
