May 23, 2026

Dear Hiring Team,

I am writing to apply for Achievers' Software Engineering Co-op Roles - Fall 2026 in Toronto. I am a B.Sc. Computer Science student at Laval University, authorized to work in Canada, and I am excited by roles where I can contribute to product-focused engineering work, build reliable features, and keep improving across the stack.

My strongest relevant experience is building and shipping full-stack software. At Mafhoum, I co-founded and helped architect a community learning platform, designed more than 50 REST API endpoints, and implemented Socket.IO real-time features, JWT rotation, OAuth login flows, Prisma schema modeling, and Dockerized local environments. That work taught me how to turn product ideas into maintainable software and how to move quickly without losing structure.

I have also shipped client-facing work in production. During my web development internship at CHC Navigation, I built a responsive product showcase website in HTML, CSS, and JavaScript and delivered it to client approval. More recently, I built a Discord-based multi-agent orchestration system and a macOS dictation app using MLX Whisper and Claude, which strengthened my integration, Python, and product-minded problem-solving skills.

I would welcome the chance to bring that background to Achievers. I am available immediately and open to internships anywhere in Canada.

Thank you for your time and consideration.

Sincerely,
Mohamed Slim
