Amazon Hiring Team
Amazon Canada

Dear Hiring Team,

I am writing to apply for Amazon's Software Development Engineer Internship - Fall 2026 (Canada). I am a B.Sc. Computer Science student at Laval University in Quebec City, authorized to work in Canada, and I am excited by the opportunity to help build reliable software at Amazon's scale.

My experience is strongest in full-stack and backend development. In Mafhoum, I co-founded and helped architect a production-bound community learning platform, designing more than 50 REST API endpoints across authentication, communities, courses, gamification, and payments. I also implemented real-time Socket.IO features, JWT rotation, OAuth login flows, Prisma schema modeling, and Dockerized development environments. That work taught me how to ship maintainable features while keeping product needs and technical tradeoffs in view.

I also bring experience with AI-enabled software and production-minded delivery. In my Multi-Agent AI Orchestrator, I built a Discord-based system in Python with the Claude Agent SDK, JSONL conversation history, and persistent memory to route messages across specialized agents. In VoiceBubble, I combined local MLX Whisper transcription with Claude-based refinement for a macOS dictation workflow. Across those projects, I focused on reliable behavior, clear interfaces, and practical user value.

I would welcome the chance to contribute that same energy to Amazon's engineering team in Canada. Thank you for your time and consideration.

Sincerely,

Mohamed Slim
