Dear Hiring Manager,

I am a Computer Science student at Laval University and I am writing to apply for AMD's Short Term 2026 Software Engineering Intern/Co-Op role. AMD's focus on high-performance computing and strong software engineering is especially appealing to me because I enjoy building reliable software that connects systems, data, and users.

At Mafhoum, I co-founded and architected a production-bound community learning platform, designed 50+ REST API endpoints, and built real-time features with Socket.IO, JWT rotation, OAuth login flows, Prisma, and Dockerized local environments. I also built UTask with Vue.js, REST APIs, and WebSockets, and I shipped a client-approved product showcase website during my 2023 internship at CHC Navigation. These experiences taught me to write practical code, debug carefully, and move features from idea to deployment.

I would bring the same mindset to AMD: learning quickly, working well with engineers, and contributing to software that is robust and maintainable. I am authorized to work in Canada, available immediately, and comfortable with the C++, Python, and JavaScript stack listed in my resume.

Thank you for your time and consideration. I would welcome the opportunity to discuss how I can contribute to AMD's software engineering team.

Sincerely,
Mohamed Slim
