Hiring Team
BCI

Dear Hiring Team,

I am applying for the Data & Analytics Engineer Co-op/Internship (Fall 2026 and/or Winter 2027). I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in the role because of its focus on Databricks, Power BI, SQL/Python datasets, and dashboard/reporting work.

My background combines software engineering with data-heavy work. At Retraite Quebec, I maintain data accuracy and compliance in a high-volume regulated environment. In my projects, I have built SQL-backed web applications, REST APIs, and real-time systems with Python, JavaScript, PostgreSQL, Pandas, Docker, and Git. I also recently integrated an API-backed AI module and reporting interface for a farm-management tool during my internship with HMD Agro SA.

I would welcome the chance to bring that mix of data discipline, engineering fundamentals, and shipping mindset to BCI. Thank you for your time and consideration.

Sincerely,
Mohamed Slim
