Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am applying for Blaise Transits Software Intern – Summer 2026 Semester (May-August, Remote - Canada) role. I am based in Quebec City, authorized to work in Canada, and comfortable with a remote Canada arrangement.

My background combines full-stack development, backend APIs, and real-time web systems. I have built a production-bound platform with React, Node.js, Express.js, PostgreSQL, Redis, Socket.IO, Prisma, and Docker; a Discord-based multi-agent orchestration system in Python; and a macOS dictation app with local Whisper transcription and Claude-based refinement. These projects taught me to build clean interfaces, debug carefully, and ship software that is useful in practice.

At Retraite Québec, I work with sensitive, high-volume data in a regulated environment, which has strengthened my attention to detail and reliability. I would bring that same discipline to Blaise Transit and contribute as a fast learner who is eager to help the team ship thoughtful software this summer.

Thank you for your time and consideration. I would welcome the opportunity to discuss the role.

Sincerely,

Mohamed Slim
