Hiring Team
CIBC

Dear Hiring Team,

I am applying for the Application/Software Developer Co-op - Capital Markets Technology role at CIBC. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in this opportunity because it combines application development, testing, implementation, and collaboration on banking technology that supports client-facing digital transformation.

Your posting emphasizes developing, coding, testing, debugging, and helping implement cross-functional, multi-platform application systems. My strongest fit is full-stack software development. On Mafhoum, a production-bound learning platform I co-founded, I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments; implemented Socket.IO real-time interactions; modeled PostgreSQL/Prisma workflows; and used Docker for reproducible development. I also have hands-on experience with React, Vue, Node.js/Express, FastAPI, SQL, Redis, JWT/OAuth, Git, Swagger/OpenAPI-backed development, and debugging application behavior across client-server flows.

I would also bring CIBC the communication and ownership habits your posting highlights. In my current HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform while coordinating scope, requirements, and milestones with stakeholders. In my CHC Navigation internship, I shipped a client-approved responsive website, and in my Retraite Quebec role I have developed accuracy, confidentiality, and deadline discipline in a regulated environment.

CIBC's hybrid Toronto role is a strong match for the kind of applied engineering work I am seeking: building reliable software, learning quickly from senior team members, and contributing to solutions that make banking simpler and more personalized for clients. I would be glad to bring my programming, API, database, testing, and stakeholder-coordination experience to your Technology team.

Sincerely,
Mohamed Slim
