Hiring Team
Ciena Canada ULC

Dear Hiring Team,

I am applying for the Wavelogic Embedded Software Development Co-op role in Ottawa for Fall 2026. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in Ciena because the WaveLogic Test Platform role combines practical software development, debugging, documentation, and collaboration with engineers building high-speed networking systems.

Your posting emphasizes participation across the software development life cycle, cross-platform software and services, C/C++ and Python development, debugging system defects and performance issues, Docker/tooling familiarity, and work with verification and test teams. My background is a strong adjacent fit: I use C++, Python, JavaScript, Docker, REST APIs, WebSockets, and database-backed systems in projects that require careful implementation and debugging. On Mafhoum, a production-bound learning platform I co-founded, I designed 50+ REST API endpoints, implemented real-time Socket.IO workflows, modeled PostgreSQL/Prisma data flows, and maintained Dockerized local environments. On UTask, I implemented feature-complete task-board behavior against a Swagger/OpenAPI backend with real-time synchronization.

I would bring Ciena a disciplined engineering approach: understand the system, implement the smallest correct change, verify behavior, document decisions, and collaborate when defects cross software and product boundaries. In my current HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform while coordinating requirements and milestones with stakeholders. In my CHC Navigation internship, I shipped a client-approved responsive product website, and my Retraite Québec role has strengthened my accuracy and deadline discipline in a regulated environment.

Although my direct experience is broader software engineering rather than device-driver development, I am comfortable learning close to the system, working in C++ and Python, and contributing to test utilities, debugging, documentation, and backlog reduction. I would be glad to bring that builder mindset to Ciena's WaveLogic Software Development team and grow under engineers working on networking platforms at global scale.

Sincerely,
Mohamed Slim
