Clearline Hiring Team
Clearline
Kitchener, Ontario

Dear Clearline Hiring Team,

I am applying for the Software Engineering Intern/Co-op role. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in Clearline because the posting emphasizes shipping real customer-facing product across backend APIs, data pipelines, front-end UI, AI workflows, testing, and fast product cycles inside a small senior engineering team.

My strongest match is hands-on full-stack execution. On Mafhoum, a production-bound community learning platform I co-founded, I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, and implemented client-server features with React, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, OAuth/JWT flows, and Dockerized local environments. That experience maps closely to Clearline's need for interns who can work across APIs, SQL-backed features, UI, Git-based development, and end-to-end product delivery.

I also bring practical AI and web experience. In my current HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform. I also built a Discord-based multi-agent AI orchestration system with persistent role memory, and a macOS dictation app using local Whisper transcription and Claude-based refinement. Earlier, as a Web Developer Intern at CHC Navigation, I designed and deployed a responsive product showcase website and reached client approval.

I would be excited to bring that ownership mindset to Clearline's engineering team and help ship reliable product improvements for dealership workflows. Thank you for your consideration.

Sincerely,
Mohamed Slim
