Hiring Team
CPP Investments
Toronto, ON

Dear Hiring Team,

I am applying for the Intern, Assurance & Advisory (Data Analytics) role at CPP Investments. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in this internship because it combines data analysis, controls-oriented thinking, and technology-enabled assurance work in a high-impact financial organization.

At Retraite Quebec, I maintain data accuracy and regulatory compliance for RRQ pension mandates in a high-volume government environment. I process sensitive client files, validate documentation, coordinate with cross-functional teams, and resolve discrepancies under deadlines. That experience maps well to audit support work where evidence quality, clear documentation, and careful risk thinking matter.

I also bring hands-on technical experience with Python, SQL, PostgreSQL, Pandas, Jupyter, and AI-assisted tools. On Mafhoum, I helped model PostgreSQL data and build REST API workflows across authentication, communities, courses, and payments. During my HMD Agro internship, I integrated an API-backed AI module and reporting interface for operational workflows. I would be glad to apply this mix of data discipline, software fundamentals, and learning mindset to CPP Investments' assurance analytics work.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my data accuracy experience, software background, and interest in AI-enabled analysis can support the Assurance & Advisory team.

Sincerely,
Mohamed Slim
