Dear DRW Hiring Team,

I am a Computer Science student at Laval University, authorized to work in Canada, and I am excited to apply for DRW's Software Developer Intern role in Montreal. The role's mix of computational software, data pipelines, agentic/RAG tooling, dashboards, and collaboration with researchers and trading teams fits the kind of practical systems work I have been building across internships and projects.

At Mafhoum, I co-founded and architected a full-stack learning platform and designed more than 50 REST API endpoints across authentication, communities, courses, gamification, and payments. I also implemented Socket.IO real-time interactions, JWT rotation, OAuth login flows, Prisma schema modeling, and Dockerized local environments. That experience maps well to DRW's need for interns who can move between backend services, frontend product surfaces, data contracts, and reliable deployment-oriented code.

I have also built an API-backed AI module and reporting interface for HMD Agro, shipped a client-approved responsive website during my CHC Navigation web development internship, and created a Python multi-agent orchestration system with Claude Agent SDK, Discord.py, JSONL history, and scheduled agent workflows. These projects strengthened my Python, JavaScript, C++, data-structure, API, and communication skills while teaching me to turn ambiguous requirements into working software.

Thank you for your time and consideration. I would welcome the opportunity to contribute to DRW as an intern who learns quickly, communicates clearly, and builds useful software with care.

Sincerely,  
Mohamed Slim
