Dear Hiring Manager,

I am a Computer Science student at Laval University and I am writing to apply for Geotab's Integrations Engineering Intern role. The Oakville-based, 12-month September 2026 term is especially appealing to me because it combines APIs, customer-facing problem solving, and hands-on integration work on Geotab's open platform.

At Mafhoum, I co-founded and architected a production-bound community learning platform, designed 50+ REST API endpoints, and built real-time features with Socket.IO, JWT rotation, OAuth login flows, Prisma, and Dockerized local environments. I enjoy turning requirements into reliable software, and I am especially interested in work that connects systems, data, and end users.

I also bring experience from CHC Navigation, where I shipped a client-approved product showcase website, and from Retraite Quebec, where I work in a regulated environment that demands accuracy, coordination, and deadline discipline. In addition, I have built Python-based automation and AI-assisted tools, which strengthened my debugging habits and my comfort with data-driven workflows.

I am authorized to work in Canada and available for the September 2026 start. I would welcome the opportunity to contribute to Geotab's partners and customers by helping analyze technical challenges, support integrations, and communicate clearly with cross-functional teams.

Thank you for your time and consideration.

Sincerely,
Mohamed Slim
