Dear Hiring Team,

I am a Computer Science student at Laval University and I am writing to apply for Geotab's Program Analyst Intern, Customer Success Operations role. The posting's focus on customer success operations, revenue operations, cross-functional analysis, and reporting matches the kind of structured, detail-oriented work I enjoy.

In my current role at Retraite Québec, I maintain data accuracy and regulatory compliance for RRQ pension mandates in a high-volume environment, process sensitive client files end-to-end, and help resolve discrepancies on tight deadlines. That experience taught me how to keep records reliable, communicate across teams, and stay organized when operational work has real downstream impact.

I also co-founded a production-bound full-stack platform at Mafhoum, where I designed 50+ REST API endpoints across multiple product areas, and I shipped a client-approved website during my web development internship at CHC Navigation. Those projects strengthened my ability to turn requirements into clear deliverables and to work through implementation details carefully.

I am authorized to work in Canada, available immediately, and based in Quebec City. I would welcome the opportunity to contribute to Geotab's customer success operations team and support the kind of reporting and analysis work that helps teams make better decisions.

Thank you for your time and consideration.

Sincerely,
Mohamed Slim
