Dear Hiring Team,

I am a Computer Science student at Laval University and I am writing to apply for Geotab's Software Developer Intern, Prism role. The posting's focus on a real-time telematics platform, SQL, database design, performance, and automated testing matches the kind of software work I have been building through full-stack projects and practical internship experience.

At Mafhoum, I co-founded and architected a production-bound platform and designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments. I also built real-time features with Socket.IO, JWT rotation, OAuth login flows, and Prisma schema modeling. In UTask, I implemented drag-and-drop task boards with real-time sync against a Swagger/OpenAPI backend. Those projects strengthened my habits around API design, data modeling, debugging, and shipping reliable software.

Outside my projects, my current role at Retraite Québec has sharpened my attention to data accuracy, deadlines, and cross-functional coordination in a regulated environment, and my internship at CHC Navigation ended with a production deployment and client approval. I am authorized to work in Canada, available immediately, and based in Quebec City.

I would welcome the chance to contribute to Geotab's MyGeotab team and help build software that processes and stores data reliably at scale. Thank you for your time and consideration.

Sincerely,
Mohamed Slim
