Hiring Team
Geotab

Dear Hiring Team,

I am writing to apply for the Software Developer Intern, MyGeotab role for Fall/September 2026. I am a Computer Science student at Laval University, authorized to work in Canada, and interested in Geotab's work delivering cloud services and web-based analytics for connected transportation.

My projects align well with the role's focus on designing, implementing, and deploying MyGeotab cloud services. On Mafhoum, a production-bound community learning platform, I co-founded and architected the application, designed 50+ REST API endpoints, and implemented authentication, real-time Socket.IO interactions, Prisma data models, and Dockerized development environments. I also built UTask against a Swagger/OpenAPI backend with CRUD task boards, drag-and-drop workflows, and real-time sync, which strengthened my API integration and client-server development experience.

Geotab's posting also emphasizes resilient cloud systems, code reviews, automated testing, source control, CI/CD, Linux, object-oriented design, and collaborative hybrid/remote work. My coursework and project work cover data structures and algorithms, operating systems, object-oriented programming, web development, database systems, and software engineering, while my internship and administrative roles have given me practice coordinating requirements, meeting deadlines, and handling detailed work in professional environments.

I would be excited to contribute to MyGeotab features that have immediate customer impact while learning from Geotab's Cloud Automation and Site Reliability teams. Thank you for your time and consideration.

Sincerely,
Mohamed Slim
