July 20, 2026

Dear Global Relay Hiring Team,

I am a Computer Science student at Laval University, authorized to work in Canada, and I am excited to apply for the Co-op AI Developer role for Fall 2026 in Vancouver. Global Relay's work on secure communication archiving, surveillance, eDiscovery, analytics, and AI/ML solutions is a strong match for the systems I have been building: Python services, data-backed reporting, full-stack APIs, and LLM-assisted tools.

At HMD Agro, I integrated an existing farm-management platform by building an API-backed AI module and reporting interface for crop and dairy workflows. I translated requirements into milestones, aligned data collection and configuration, and worked with stakeholders to keep delivery on schedule. This maps directly to Global Relay's need for interns who can write Python code, support data pipelines, document designs, test code, and collaborate with developers and data scientists.

I also co-founded Mafhoum, a production-bound learning platform where I designed more than 50 REST API endpoints, implemented real-time Socket.IO interactions, modeled PostgreSQL data with Prisma, and used Dockerized local environments. My Multi-Agent AI Orchestrator project added further AI tooling experience through Python, Claude Agent SDK, Discord.py, JSONL history, persistent memory, and scheduled agent workflows. These projects strengthened my software fundamentals, communication, and ability to learn quickly in an Agile team.

Thank you for your time and consideration. I would welcome the opportunity to contribute to Global Relay as a co-op developer who brings practical Python, API, data, and AI-tooling experience while continuing to grow under strong technical mentorship.

Sincerely,
Mohamed Slim
