July 20, 2026

Dear Global Relay Hiring Team,

I am a Computer Science student at Laval University, authorized to work in Canada, and I am excited to apply for the Co-op C# Developer role for Fall 2026 in Vancouver. Global Relay's work in secure communication archiving, surveillance, eDiscovery, analytics, and compliance technology stands out to me because it combines practical software engineering with reliability, security, and real business impact.

My strongest fit is backend and product-oriented development across APIs, data models, and clean integration work. At Mafhoum, I co-founded and architected a production-bound learning platform and designed more than 50 REST API endpoints across authentication, communities, courses, gamification, and payments. I also implemented Socket.IO real-time interactions, JWT rotation, OAuth login flows, Prisma/PostgreSQL schema modeling, and Dockerized local environments. This experience maps well to Global Relay's emphasis on clean, reviewed, performant, secure code and service-oriented APIs.

I also built an API-backed AI module and reporting interface for HMD Agro, shipped a client-approved responsive website during my CHC Navigation internship, and created a Python multi-agent orchestration system with Claude Agent SDK, Discord.py, JSONL history, and scheduled workflows. While my verified coursework and project background is strongest in JavaScript, Python, C++, Java, SQL, REST, Docker, and object-oriented programming, I would be ready to ramp into the C#/.NET stack with the same disciplined approach I use for tested, documented software.

Thank you for your time and consideration. I would welcome the opportunity to contribute to Global Relay as a co-op developer who communicates clearly, learns quickly, and builds reliable software with care.

Sincerely,
Mohamed Slim
