July 20, 2026

Dear Global Relay Hiring Team,

I am a Computer Science student at Laval University, authorized to work in Canada, and I am excited to apply for the Co-op Frontend Software Developer (Information Archiving) role for Fall 2026 in Vancouver. Global Relay's work on secure information archiving, surveillance, eDiscovery, and analytics is compelling to me because it combines user-facing software with reliability, compliance, and production-quality engineering.

In my CHC Navigation web developer internship, I designed and shipped responsive product pages with HTML, CSS, and JavaScript, reaching production deployment and client approval. More recently, I co-founded Mafhoum, a production-bound learning platform where I build React product flows, design REST API endpoints, connect real-time Socket.IO interactions, model PostgreSQL data, and keep frontend behavior aligned with backend services through reviews and clear data contracts.

I also bring practical experience with Python, Docker, Git, SQL, Vue.js, Node.js, and API-backed reporting through projects such as UTask, VoiceBubble, and my HMD Agro internship. The responsibilities in this role—implementing React/TypeScript/JavaScript interfaces, collaborating with UX, working through design and code reviews, testing thoroughly, and seeing features through to production—match the way I am trying to grow as a developer: careful with fundamentals, responsive to feedback, and focused on shipping usable software.

Thank you for your time and consideration. I would welcome the opportunity to contribute to Global Relay's Information Archiving team while learning from senior developers and building polished, reliable web interfaces for regulated enterprise customers.

Sincerely,
Mohamed Slim
