May 25, 2026

Dear Hiring Team,

I am writing to apply for GoMaterials' Product & AI Enablement Intern - Fall 2026 role in Montreal. I am a B.Sc. Computer Science student at Laval University, authorized to work in Canada, and available immediately. The mix of product work, automation, and AI tooling is exactly the kind of internship I am looking for.

My background combines shipping software with practical AI experimentation. At Mafhoum, I co-founded a full-stack platform and helped design 50+ REST API endpoints across auth, communities, courses, gamification, and payments. I also built a Discord-based multi-agent orchestration system with the Claude Agent SDK, persistent memory, and cron-triggered workflows for standups, progress checks, reviews, and hand-offs. In VoiceBubble, I built a macOS dictation app with MLX Whisper transcription and Claude-based refinement, which strengthened my interest in turning AI into useful product features.

I also bring experience working in a client-facing environment. During my Web Developer internship at CHC Navigation, I built a responsive product showcase website that reached production deployment and client approval. In my current role at Retraite Quebec, I work with sensitive data, deadlines, and cross-functional coordination in a regulated setting, which has made me careful, reliable, and detail-oriented.

I would welcome the opportunity to contribute those skills to GoMaterials and support a team building product and AI enablement work in a hybrid Montreal environment. Thank you for your time and consideration.

Sincerely,

Mohamed Slim
