July 13, 2026

Dear Hiring Team,

I am a Computer Science student at Laval University and I am excited to apply for Hitachi Rail's Software Analyst Intern (Fall 2026, 12 months) role in Toronto. I am authorized to work in Canada and open to internships anywhere in Canada. The role's focus on safety-critical software, automation, testing, CI/CD support, and dashboards is a strong fit for my software engineering background and my interest in reliable systems that support real-world operations.

In my current HMD Agro internship, I am integrating an existing farm-management platform by building an API-backed AI module and reporting interface for crop and dairy workflows. I coordinate requirements with the supervisor and PDG, turn the work into milestones, and align data collection and configuration so the software can be used in an operational setting. That experience maps well to Hitachi Rail's need for interns who can follow processes, document work, and support engineering teams with useful tools.

I have also co-founded Mafhoum, a full-stack learning platform where I designed more than 50 REST API endpoints, implemented authentication flows, real-time Socket.IO features, PostgreSQL/Prisma data modeling, and Dockerized development environments. Alongside that, my projects include a Python-based multi-agent orchestration system and a Vue.js task-board application built against a Swagger/OpenAPI backend. These projects give me practical experience with Python, C++, JavaScript, SQL, Git, APIs, testing-minded development, and collaborative delivery.

Thank you for your time and consideration. I would welcome the opportunity to contribute to Hitachi Rail Canada as an intern who learns quickly, communicates clearly, and supports the Vital Software Engineering team with reliable software, automation, and documentation.

Sincerely,
Mohamed Slim
