Hiring Team
Kensington Tours

Dear Hiring Team,

I am applying for the Intern - Operations, Ultraluxe Product role in Toronto. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in Kensington because the internship combines product information quality, research, workflow coordination, and careful execution for high-touch travel experiences.

My experience fits the role's need for accuracy, organization, and structured follow-through. At Retraite Quebec, I maintain data accuracy and compliance while processing sensitive client files in a high-volume government environment, coordinating with cross-functional teams to resolve discrepancies under deadlines. That work maps directly to maintaining reliable product and supplier information, organizing files, and supporting internal workflow queues.

I also bring product-building and content-organization habits from technical projects. In Mafhoum, a production-bound community learning platform I co-founded, I helped scope features, prioritize a roadmap, design 50+ REST API endpoints, and structure user-facing product experiences. During my CHC Navigation internship, I built and deployed a product showcase website and organized technical content for GNSS/GPS and topography equipment so product specifications were easier to navigate.

I can bring Kensington a detail-oriented intern who is comfortable with research synthesis, structured summaries, data/content accuracy, and collaborative support across teams. I would be glad to help the Ultraluxe team with itinerary and supplier information, product audits, market research, reporting, and documentation while learning how Kensington develops personalized luxury travel products at scale.

Sincerely,
Mohamed Slim
