May 25, 2026

Dear Hiring Team,

I am writing to apply for the Winter 2027 Software Engineering Intern position at NationGraph in Toronto. I am a Computer Science student at Laval University, authorized to work in Canada, and I have hands-on experience building full-stack web applications, REST APIs, client-server features, real-time systems, and AI-assisted tools with React, Node.js, PostgreSQL, Docker, and Python.

Through projects like Mafhoum, I have helped build a production-bound platform with 50+ REST API endpoints, authentication flows, and Socket.IO real-time features. In other work, I built a Discord-based multi-agent orchestration system and a macOS dictation app powered by MLX Whisper and Claude-based refinement. These experiences taught me how to break down requirements, ship iteratively, and keep implementation details organized across a team.

My internship experience at CHC Navigation also strengthened my ability to deliver polished web work in a client-facing setting, while my current role at Retraite Québec has reinforced accuracy, accountability, and comfort working with sensitive data in a high-volume environment.

I would welcome the opportunity to contribute these skills to NationGraph's software engineering team. Thank you for your time and consideration.

Sincerely,
Mohamed Slim
