Hiring Team
Nokia

Dear Hiring Team,

I am applying for the Web Developer – Co-op/Intern role at Nokia in the Fall 2026 term. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in the role's focus on React-based web GUI features, enterprise-grade user experience, REST APIs, Git, and Agile collaboration with developers, testers, product management, and support teams.

My strongest overlap is in practical web application development. On Mafhoum, a production-bound learning platform I co-founded, I am building with React 19, JavaScript, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, and Docker, and I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments. I also implemented real-time interactions and authentication flows, which gives me a solid base for contributing to web interfaces connected to backend services.

I have also shipped web work in a professional setting. During my CHC Navigation internship, I designed and deployed a responsive HTML, CSS, and JavaScript product showcase website for GNSS/GPS and topography equipment, reaching production deployment and client approval. My current HMD Agro internship has strengthened how I translate requirements into milestones while integrating an API-backed module and reporting interface into an existing platform.

Nokia stands out to me because the posting connects front-end web engineering with network technology, SDN exposure, and software used by real enterprise teams. I would be glad to bring my React, JavaScript, REST API, Git, and Agile project experience while learning from Nokia's engineering team in the Ottawa/Kanata hybrid environment.

Sincerely,
Mohamed Slim
