PepsiCo Canada Hiring Team
Re: Fall 2026 IT Analytics Co-op

Dear PepsiCo Canada Hiring Team,

I am applying for the Fall 2026 IT Analytics Co-op in Mississauga. I am a Computer Science student at Laval University, based in Quebec City and authorized to work in Canada. The role interests me because it combines business requirements, analytics tooling, process modernization, AI/ML proof of concepts, and stakeholder communication inside a large Canadian operating environment.

My strongest match is the mix of software, data, and practical execution. Through my studies and projects I work with Python, SQL, JavaScript, PostgreSQL, Pandas, scikit-learn, REST APIs, and Agile/Scrum practices. On Mafhoum, I co-founded and architected a full-stack learning platform, designed more than 50 REST API endpoints, modeled data with PostgreSQL and Prisma, and helped turn product ideas into a prioritized roadmap. My Multi-Agent AI Orchestrator and VoiceBubble projects also gave me hands-on practice with LLM workflows, prompt engineering, automation, and iterative experimentation.

I also bring careful data-handling experience. In my current Retraite Quebec role, I maintain data accuracy and compliance for high-volume pension mandates, process sensitive client files, and coordinate with cross-functional teams to resolve discrepancies under deadlines. During my CHC Navigation internship, I shipped a client-approved product website and organized technical product information clearly for users. Those experiences align well with PepsiCo's need for an intern who can gather requirements, communicate status, support testing, document work, and build useful analytics capabilities.

I would be excited to contribute to PepsiCo Canada's IT analytics team while learning from business and technology leaders in a fast-moving environment. Thank you for your consideration.

Sincerely,
Mohamed Slim
