Hiring Team
Ratehub.ca

Dear Hiring Team,

I am applying for the Analytics Engineer Intern – 8 month contract role at Ratehub.ca. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in the remote-first analytics engineering work described in the posting: SQL modeling, data validation, dbt tests, BI migration work, and reliable dashboards.

My strongest overlap is in Python, SQL, backend APIs, and data-backed product systems. On Mafhoum, a production-bound learning platform I co-founded, I designed 50+ REST API endpoints and modeled PostgreSQL workflows across authentication, communities, courses, gamification, and payments. In my current HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform, aligning requirements with stakeholders and turning workflow data needs into milestones.

I would bring Ratehub.ca a practical engineering mindset: understand the business question, structure the data cleanly, verify the result, and make the output usable for the people who depend on it. My Retraite Québec role has also strengthened my attention to accuracy, compliance, and deadline discipline while processing sensitive, high-volume client files.

Ratehub.ca's internship stands out because it connects analytics engineering to user-facing financial decisions and business intelligence work. I would be glad to contribute my SQL/Python, API, and reporting experience while learning from the team working on production analytics systems.

Sincerely,
Mohamed Slim
