May 25, 2026

Dear Hiring Manager,

I am writing to apply for RBC Insurance's Fall AI Engineering Co-op in Mississauga. I am a B.Sc. Computer Science student at Laval University, authorized to work in Canada, and available immediately. I am especially interested in this role because it combines Python, DevOps, data science, and problem solving in an AI-focused engineering environment.

My background combines backend development, AI tooling, and practical shipping experience. At Mafhoum, I co-founded and helped architect a production-bound platform, designed more than 50 REST API endpoints, and implemented PostgreSQL, Redis, Prisma, Socket.IO, JWT rotation, OAuth login flows, and Dockerized local environments. In my Multi-Agent AI Orchestrator project, I built a Python-based system with the Claude Agent SDK, persistent JSONL history, and cron-triggered agent workflows. I also built VoiceBubble, a macOS dictation app that combines local MLX Whisper transcription with Claude-based refinement.

I also bring strong habits around accuracy and reliability from my current role at Retraite Quebec, where I maintain data accuracy and regulatory compliance for RRQ pension mandates in a high-volume government environment. That experience has strengthened my attention to detail, comfort with sensitive data, and ability to deliver consistently under deadlines.

Thank you for your time and consideration. I would welcome the chance to discuss how my Python, AI, and software engineering background could contribute to RBC Insurance.

Sincerely,
Mohamed Slim
