Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am excited to apply for SAP iXp Intern - Concur Travel AI Software Developer [Vancouver]. I am authorized to work in Canada, available immediately, and interested in building software that combines reliable product engineering with practical AI features.

What draws me to this role is the mix of product delivery and applied AI. I have built a Discord-based multi-agent system in Python using the Claude Agent SDK, a macOS dictation app that combines local MLX Whisper transcription with Claude-based refinement, and a production-bound full-stack platform with React, Node.js, PostgreSQL, Redis, Socket.IO, Prisma, and Docker. Across those projects, I have focused on shipping useful software, keeping data flow disciplined, and iterating quickly from requirements to implementation.

I also bring experience handling sensitive administrative data in a government-regulated environment at Retraite Québec, where accuracy and accountability matter every day. I would welcome the opportunity to contribute that same care and momentum to SAP Concur Travel in Vancouver.

Thank you for your time and consideration. I would be glad to discuss how my software and AI project experience could support your team.

Sincerely,
Mohamed Slim
