SAP Hiring Team
SAP

Dear Hiring Team,

I am writing to apply for the SAP iXp Intern - IT Technical Consultant (Developer) position in Vancouver. I am a B.Sc. Computer Science student at Laval University in Quebec City, authorized to work in Canada, and I am interested in the role because it combines development, quality assurance, Agile delivery, integrations, and learning across SAP and non-SAP applications.

My strongest software experience is in full-stack and API-backed systems. In Mafhoum, I co-founded and helped architect a production-bound community learning platform using React, Express.js, PostgreSQL, Redis, Socket.IO, Prisma, and Docker. I designed more than 50 REST API endpoints across authentication, communities, courses, gamification, and payments, and worked with a small team to turn product scope into shippable milestones.

I also bring experience that maps directly to SAP's developer and QA expectations. I have built authenticated real-time features, worked with Swagger/OpenAPI-backed REST services, used Git and Docker, and applied testing-minded development through projects such as UTask, where I implemented boards, lists, cards, drag-and-drop, and real-time sync against an API backend. My Multi-Agent AI Orchestrator and VoiceBubble projects also give me practical exposure to Python, LLM workflows, automation, and experimenting with new tools quickly.

I would welcome the opportunity to contribute to SAP's CPIT / IT Marketing team while continuing to grow through the SAP Internship Experience Program. Thank you for your time and consideration.

Sincerely,

Mohamed Slim
