May 23, 2026

Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am excited to apply for Scotiabank's Velocity - AI Engineer Internship/Co-op - Fall 2026 role in Toronto. The combination of AI, software, and a banking environment is a strong match for my background building practical systems that are testable, useful, and ready to ship. I am authorized to work in Canada and available immediately.

My recent work is centered on applied AI and software delivery. At HMD Agro SA, I integrated an API-backed AI module and reporting interface into an existing farm-management tool, translating requirements into a deployable product. I also built a Discord-based multi-agent orchestration system in Python with cron-triggered standups, progress checks, reviews, and handoffs, plus a macOS dictation app that combines local Whisper transcription with Claude-based refinement. These projects strengthened my Python, API design, and experimentation habits.

I have also shipped client-approved web work during a 2023 internship and co-founded Mafhoum, where I helped architect a production-bound full-stack platform with 50+ REST API endpoints, real-time features, and Dockerized development environments. I would welcome the opportunity to contribute as a student who enjoys learning quickly, collaborating well, and shipping reliable software.

Thank you for your time and consideration.

Sincerely,

Mohamed Slim
