Dear Hiring Manager,

I am a Computer Science student at Laval University and I am excited to apply for Scotiabank's Velocity - Data Engineer Internship/Co-op - Fall 2026 role in Toronto. The role fits my background in Python, SQL, database-backed applications, and building reliable systems that move data through APIs and real-time features.

At Mafhoum, I co-founded a production-bound community learning platform and designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments. I also worked with PostgreSQL, Redis, Prisma schema modeling, Socket.IO, and Dockerized environments, which taught me how to structure data-heavy systems and keep them reproducible for development and iteration.

I have also built a dictation app with local MLX Whisper transcription and a Python-based multi-agent orchestration system using the Claude Agent SDK. In parallel, my work as an Administrative Technician at Retraite Quebec has strengthened my attention to data accuracy, compliance, and high-volume operational work in a regulated environment.

I am authorized to work in Canada, available immediately, and open to Toronto and opportunities across Canada. I would welcome the chance to contribute to Scotiabank's team and support data engineering work that is dependable, maintainable, and user-focused.

Thank you for your time and consideration.

Sincerely,
Mohamed Slim
