Hiring Team  
SOTI

Dear Hiring Team,

I am applying for the Software Developer Intern role for September 2026. I am a Computer Science student at Laval University, authorized to work in Canada without sponsorship, and I am interested in SOTI because the internship focuses on building professional software products in collaborative Agile teams while learning the full software delivery lifecycle.

My strongest fit is hands-on full-stack software development. I co-founded Mafhoum, a production-bound community learning platform built with React 19, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, and Docker. I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, implemented real-time features, and worked with JWT/OAuth authentication flows. That experience aligns with SOTI's need for interns who understand programming fundamentals, databases, problem solving, and team-based product development.

I also bring practical internship and tooling experience. At CHC Navigation, I designed and shipped a responsive product showcase website in HTML, CSS, and JavaScript that reached production deployment and client approval. In my recent projects, I have used Python, JavaScript, Git, REST APIs, WebSockets, and structured debugging to build reliable systems, including a multi-agent AI orchestrator and a macOS dictation app using Whisper and Claude-based refinement.

I would be excited to bring my programming, data-structure, database, Git, and Agile software-development experience to SOTI's 12-month internship while continuing to learn from experienced developers, QA, UX, product, and architecture teammates.

Sincerely,  
Mohamed Slim
