May 25, 2026

Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am writing to apply for Sun Life's Student, Software Engineer (Fall 2026) role in Toronto. I am authorized to work in Canada, available immediately, and excited by the chance to contribute to software work with APIs, cloud, and DevOps exposure.

My experience is centered on building practical software across backend and user-facing layers. At Mafhoum, I co-founded and helped architect a full-stack community learning platform, designed 50+ REST API endpoints across auth, communities, courses, gamification, and payments, and implemented JWT rotation, OAuth login flows, Socket.IO real-time features, and Dockerized local environments. In UTask, I built client-server task boards with drag-and-drop and real-time sync against a Swagger/OpenAPI backend. These projects strengthened my ability to build maintainable systems and ship features that connect cleanly across the stack.

I also bring experience delivering client-facing software in an internship setting. At CHC Navigation, I built a responsive product showcase website that reached production deployment and client approval. In my current role, I work with sensitive administrative data in a regulated environment, which has reinforced accuracy, process discipline, and steady execution under deadline pressure.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my background in software engineering, APIs, and reliable delivery could contribute to Sun Life.

Sincerely,
Mohamed Slim
