Super.com Hiring Team
Toronto, Ontario, Canada

Dear Super.com Hiring Team,

I am applying for the Data Analytics Intern, Risk & Fraud role. I am a Computer Science student at Laval University based in Quebec City, and I am authorized to work in Canada without sponsorship. Super.com's remote-first model is a strong fit for me: I can work from Canada with Eastern Time overlap, and I am especially interested in the chance to use data to improve product performance and reduce risk in a fast-moving consumer technology environment.

My background combines software engineering with practical data work. In my current HMD Agro internship, I am integrating an existing farm-management platform by building an API-backed AI module and reporting interface, which requires turning operational needs into structured data workflows. At Retraite Québec, I maintain data accuracy and compliance across sensitive, high-volume client files. In projects, I have worked with Python, SQL, Pandas, Jupyter, PostgreSQL, SQLite, APIs, and dashboard-ready reporting patterns.

I would bring Super.com a hands-on, analytical intern who can clean and organize data, investigate patterns, and communicate findings in a way stakeholders can act on. While I have not claimed direct experience with Super.com's full analytics stack, I am comfortable learning new tools quickly and applying strong fundamentals in SQL, Python analysis, statistics coursework, and product-oriented problem solving.

Thank you for your time and consideration. I would be excited to contribute to the Risk & Fraud data team and learn from Super.com's data-driven culture.

Sincerely,
Mohamed Slim
