Hiring Team
Super.com

Dear Hiring Team,

I am applying for the Data Engineering Intern role at Super.com for the Fall 2026 term. I am a Computer Science student at Laval University, authorized to work in Canada, and I am excited by the chance to contribute to a remote-first Canadian startup where interns work on shipping systems and high-volume data problems.

Your posting highlights scalable ELT pipelines, warehouse governance, data quality, automated testing, and a modern stack including Airflow, Fivetran, Snowflake, dbt, Looker, and Hightouch. My background is strongest in Python, SQL, backend APIs, and data-backed product systems. On Mafhoum, a production-bound learning platform I co-founded, I designed 50+ REST endpoints and modeled PostgreSQL/Prisma data workflows across authentication, communities, courses, gamification, and payments. I also use Redis, Docker, and API verification practices to keep local development reliable and reproducible.

I would bring Super.com a practical engineering mindset: build the pipeline or interface, verify the behavior, and keep it usable for the people who depend on the data. In my current HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform, aligning requirements with stakeholders and translating workflow needs into working milestones. In my Retraite Québec role, I handle sensitive, high-volume client files where accuracy, compliance, and deadline discipline matter every day.

Super.com's internship stands out because it combines real shipped work, autonomy, and measurable data scale, including pipelines supporting millions of searches per day. I would be glad to bring my Python/SQL, backend, and product-building experience to the data engineering team and keep learning from engineers working on production data systems.

Sincerely,
Mohamed Slim
