Hiring Team
Tenstorrent

Dear Hiring Team,

I am applying for the Acceleration Kernel Developer Intern role in Toronto. I am a Computer Science student at Laval University and am authorized to work in Canada. Tenstorrent's work on AI systems, compilers, platforms, RISC-V CPUs, and performance-critical software is exactly the kind of environment where I want to grow from a strong software foundation into lower-level AI systems engineering.

My strongest overlap is building AI-oriented and data-backed software with Python and a careful engineering workflow. I built a Discord-based multi-agent AI orchestration system using Claude Agent SDK, Discord.py, JSONL history, isolated prompts, and persistent memory so specialized agents could keep role-specific context across sessions. I also built VoiceBubble, a macOS push-to-talk app combining local MLX Whisper transcription, Claude-based text refinement, PyQt6, and SQLite. These projects gave me hands-on experience integrating AI components into reliable tools and debugging across application, data, and model-facing layers.

I also bring full-stack engineering depth from Mafhoum, a production-bound learning platform I co-founded with React 19, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, and Docker. I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, and implemented real-time interactions and authentication flows. Together with coursework in algorithms, operating systems, machine learning, databases, and software engineering, this gives me a solid base for learning kernel development, profiling, optimization, and test infrastructure in a mentored internship.

I understand that this role emphasizes C/C++, Python, algorithm implementation, performance profiling, tensor-oriented optimization, testing, and documentation. I am not claiming direct GPU-kernel or HPC production experience, but I am motivated to learn quickly, contribute disciplined code, and bring curiosity, persistence, and strong collaboration to the Toronto team.

Sincerely,
Mohamed Slim
