Hiring Team
Valin Solutions Limited
Stoney Creek, Ontario

Dear Hiring Team,

I am applying for the Internship in Linux System Administration at Valin Solutions Limited. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in the role because it combines Linux system administration, Python automation, cloud deployment, and containerized application work in a practical IT services environment.

My background is strongest in Python, full-stack development, databases, APIs, Docker, and operating-systems coursework. In my current HMD Agro internship, I am integrating an existing farm-management platform by building an API-backed AI module and reporting interface, while coordinating requirements and milestones with stakeholders. In my Mafhoum project, I co-founded and architected a production-bound platform using React, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, and Dockerized local environments. These experiences give me a solid foundation for learning your Linux, Ansible, AWS, Azure, and OpenShift workflows without overstating experience I have not yet had professionally.

I would bring disciplined troubleshooting, clear documentation, and a willingness to learn quickly in a managed IT setting. I am comfortable working from fundamentals, asking precise questions, and turning technical requirements into reliable, testable work. I would be glad to support Valin Solutions' system administration and automation tasks while continuing to grow into cloud and Linux operations responsibilities.

Thank you for your consideration. I would welcome the opportunity to discuss how my software, Python, Docker, and operating-systems foundation can contribute to Valin Solutions during this internship.

Sincerely,

Mohamed Slim
