July 13, 2026

Dear Hiring Team,

I am a Computer Science student at Laval University and I am excited to apply for Zip's Software Engineer Intern (Fall 2026) role in Toronto. I am authorized to work in Canada, based in Quebec City, and open to internships anywhere in Canada. Zip's product-focused software engineering work is a strong fit for my background in full-stack development, real-time systems, and shipping web features end to end.

At Mafhoum, I co-founded and architected a full-stack learning platform and designed more than 50 REST API endpoints across authentication, communities, courses, gamification, and payments. I also implemented Socket.IO real-time features, JWT rotation, OAuth login flows, Prisma schema modeling, and Dockerized local environments. That work taught me how to keep front-end behavior, backend services, and data contracts aligned while moving quickly from idea to implementation.

I have also shipped a client-approved responsive website during my web development internship at CHC Navigation, and I built a Discord-based multi-agent orchestration system in Python plus a macOS dictation app using MLX Whisper and Claude. Across these projects, I have focused on practical product delivery, clear communication, and writing code that is easy to maintain and extend.

Thank you for your time and consideration. I would welcome the opportunity to contribute as an intern who can learn fast, ship reliable software, and support a strong product experience.

Sincerely,
Mohamed Slim
