Kinaxis Hiring Team
Ottawa, ON

Dear Hiring Team,

I am writing to apply for the Co-op/Intern Software Developer, Developer Framework role at Kinaxis in Ottawa. I am a Computer Science student at Laval University, authorized to work in Canada, and available immediately. I am especially interested in this role because it combines software fundamentals, developer-facing tooling, and a product environment where reliable interfaces and clean architecture matter.

In my projects, I have built full-stack systems that emphasize the same foundations. On Mafhoum, I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, and implemented real-time Socket.IO features with JWT rotation, OAuth login flows, and Prisma schema modeling. In my Multi-Agent AI Orchestrator, I built a Discord-based system that routes work to specialized agents and keeps context persistent across sessions using JSONL memory. These projects strengthened my habits around interface design, incremental delivery, and debugging complex application flows.

I also bring experience working carefully in structured environments. At CHC Navigation, I shipped a client-approved product showcase website, and in my current role at Retraite Quebec, I handle sensitive data and high-volume work with attention to accuracy and deadlines.

I would welcome the opportunity to contribute to Kinaxis by helping build dependable software foundations, improving developer workflows, and supporting a team that ships high-quality products. Thank you for your time and consideration.

Sincerely,
Mohamed Slim
