A Thinking Ape Hiring Team
A Thinking Ape

Dear Hiring Team,

I am writing to apply for the Software Development Engineer Co-op (Sept. 2026) position at A Thinking Ape. I am a B.Sc. Computer Science student at Laval University in Quebec City, authorized to work in Canada, and the remote Canada-only setup is a strong fit for me. The role's focus on full-stack and client-server work aligns well with the projects and internships I have been building toward.

My strongest technical experience comes from building systems that combine APIs, real-time features, and clean product delivery. In Mafhoum, I co-founded and helped architect a production-bound community learning platform using React, Express.js, PostgreSQL, Redis, Socket.IO, Prisma, and Docker. I designed more than 50 REST API endpoints across auth, communities, courses, gamification, and payments, and helped turn product ideas into shippable milestones.

I also bring internship experience from CHC Navigation, where I built a responsive product showcase website in HTML, CSS, and JavaScript that reached production deployment and client approval. That experience taught me how to ship user-facing software carefully, communicate clearly with stakeholders, and keep the implementation aligned with real requirements.

I would welcome the opportunity to bring that same mindset to A Thinking Ape and contribute to a team building mobile game software for Canadian users. Thank you for your time and consideration.

Sincerely,

Mohamed Slim
