Dear Ada Hiring Team,

I am a Computer Science student at Laval University and I am excited to apply for Ada's Software Engineering Intern role. I am authorized to work in Canada, based in Quebec City, and well aligned with Ada's remote-first Canada environment. Ada's focus on AI customer service and production AI agent technology is especially interesting to me because my strongest experience sits at the intersection of full-stack software, APIs, real-time systems, and practical AI tooling.

At Mafhoum, I co-founded and architected a full-stack community learning platform and designed more than 50 REST API endpoints across authentication, communities, courses, gamification, and payments. I also implemented Socket.IO real-time features, JWT rotation, OAuth login flows, Prisma schema modeling, and Dockerized local environments. That work gave me practice turning defined product problems into maintainable code while keeping frontend behavior, backend services, and data contracts aligned.

I also bring previous internship experience: at CHC Navigation, I shipped a responsive product showcase website to production and secured client approval, and at HMD Agro I integrated an API-backed AI module and reporting interface for crop and dairy workflows. Alongside those roles, I built a Discord-based multi-agent orchestration system with Python, Claude Agent SDK, JSONL history, and scheduled agent handoffs, which reflects my interest in learning and contributing in AI-focused engineering teams.

Thank you for your time and consideration. I would welcome the opportunity to contribute to Ada as an intern who can learn quickly, communicate clearly, and deliver reliable production-ready software with direction from the team.

Sincerely,
Mohamed Slim
